SUMMARY

Experienced Full-Stack Software Engineer building scalable cloud applications and artificial intelligence (AI) workflows with JavaScript, TypeScript, React, Next.js, Object-Oriented Programming (OOP) languages, and Amazon Web Services (AWS). Bilingual (English/Spanish) with strengths in system design, collaboration, and mentoring others to do the same.

PROFESSIONAL AND TECHNICAL SKILLS

- **AI & Automation:** Ai Agents, Context Engineering, Evaluations (evals), MCP, RAG, OpenAI API, LLMs,
- **Languages:** TypeScript, JavaScript, Python, Java, C++, SQL
- **Web & Cloud:** React, Next.js, Node.js, FastAPI, AWS, Docker, Vercel, CI/CD.
- **Testing & Data:** Playwright, Pytest, Unit Testing, PostgreSQL, MongoDB

EXPERIENCE

Software Engineer Intern | Inrupt | Boston, MA (Hybrid) Apr 2026 - Jul 2026

- Collaborated with engineers on [Charlie](#), Inrupt's personal AI agent, to build Playwright end-to-end tests and GitHub Actions CI/CD pipelines for its React/TypeScript/CSS frontend, contributing 108 merged PRs in 11 weeks across core user-facing experiences while reducing shared test-teardown runtime from ~7.7 minutes to ~40 seconds
- Built reusable AI-agent skills, evaluation harnesses, reviewer subagents, CLI guardrails including hooks, slash commands, and self-evaluation gates to make LLM workflows more deterministic and token-efficient

Full-Stack Developer & Mentor | [ULEM](#) | Boston, MA May 2021 - Feb 2025

- Partnered with program coordinators, curriculum designers, and volunteer instructors to plan and run the bootcamp series, adjusting pacing and content based on group feedback each week
- Rebuilt the organization's web UI with React and Tailwind, cutting page load times by 40% and mentored 50+ early-career technologists through mock interviews and workshops

AI Engineer Intern | North Light AI | Remote Sep 2024 - Jan 2025

- Worked across a remote Agile team of 5 and Designed and deployed AI tools using GPT-4 and Whisper to automate audio transcription and document summarization, reducing workflow bottlenecks by 32%
- Built and deployed containerized machine learning pipelines from data ingestion through model evaluation in a local development environment, improving model accuracy and reliability through validation, logging, and retry controls

Software Engineer Intern | Wayfair | Boston, MA May 2023 - Aug 2023

- Worked alongside senior engineers and data teams and Refactored legacy services into Python microservices, working through the existing architecture before touching anything and raising blockers early in daily standups
- Built real-time Kafka data pipelines that brought event ingestion latency down significantly by defining schema contracts

EDUCATION

- **Bunker Hill Community College A.S. Computer Science | A.A. Mathematics Concentration**
 - PHI THETA KAPPA | Expected Graduation: June 2027
- **Amazon Web Services | [AWS Certified Cloud Practitioner](#)**
- **Coursera | [Meta Front-End Developer](#)**
- **CISCO Network Academy | [C++ Essential 1](#) and [C++ Essential 2](#)**

PROJECTS

[Developer Portfolio](#) | Next.js, TypeScript, Vercel AI SDK, Groq, MongoDB

- Built a grounded, streaming AI chat assistant with the Vercel AI SDK and Groq that answers questions about my work, with tool-calling lead capture and prompt-injection defenses

Personal Knowledge Base "Second Brain" | Obsidian, Graphify, Qdrant, LangGraph, Ollama

- Built a local, multi-vault GraphRAG system: a Graphify knowledge graph plus Qdrant vector search, queried by a self-grading LangGraph agent on local Ollama models that retrieves, retries, and synthesizes across vaults
