SUMMARY

Aspiring Full-Stack Software Engineer building scalable cloud applications and artificial intelligence (AI) workflow automation with JavaScript, TypeScript, React, Next.js, Object-Oriented Programming (OOP) languages, and Amazon Web Services (AWS). Bilingual (English/Spanish) with strengths in system design, collaboration, and mentoring.

EDUCATION

Associates of Science in Computer Science | Associates of Arts in Mathematics Concentration

Bunker Hill Community College | PHI THETA KAPPA | Expected Graduation: June 2027

Coursera | [Meta Front-End Developer](#) | Completed: January 2025

CISCO Network Academy | [C++ Essential 1](#) and [C++ Essential 2](#) | Completed: July 2025

PROFESSIONAL AND TECHNICAL SKILLS

- **Frontend:** JavaScript, TypeScript, React.js, Next.js, Tailwind CSS. **Backend:** Node.js, Nest.js, Express.js, Python, Java, C++. **Databases:** PostgreSQL, MongoDB, MySQL. **DevOps & Cloud:** AWS, Docker, Microsoft Azure. **Tools & Platforms:** Git, GitHub, Jira, Visual Studio Code, PyCharm, WebStorm, IntelliJ IDEA, CLion. **Operating Systems:** macOS and Windows

RELATED EXPERIENCE

Full-Stack Developer & Mentor | Urban League of Eastern Massachusetts | Boston, MA | May 2021 - Feb 2025

- Developed and maintained web applications using React and Tailwind, streamlining UI navigation and improving page load times by 40%
- Mentored over 50 early-career technologists, leading workshops and mock interviews to prepare them for technical roles in the workforce
- Facilitated weekly development bootcamps, helping participants gain fluency in modern frontend, such as React, through hands-on projects and peer review

AI Engineer Intern | North Light AI | Remote | September 2024 - Jan 2025

- Designed and deployed AI tools using GPT-4 and Whisper to automate audio transcription and document summarization, reducing workflow bottlenecks by 32%
- Built and deployed containerized machine learning pipelines from data ingestion through model evaluation in a local development environment, improving model accuracy and reliability through validation, logging, and retry controls
- Coordinated work across a remote Agile team of 5 developers, supporting sprint planning, task tracking, and on-time delivery through clear communication and follow-through

Software Engineer Intern | Wayfair | Boston, MA | May 2023 - August 2023

- Refactored critical legacy services into modular Python-based microservices, enhancing scalability and reducing technical debt
- Built and deployed real-time data pipelines using Kafka, enabling faster ingestion and processing of high volume event streams
- Containerized internal tools with Docker and integrated CI/CD workflows, shortening deployment cycles by 30% across multiple environments

PROJECTS

Book Recommendation System | Python, OpenAI API, LangChain, Gradio

- Built an intelligent book recommender that uses semantic search, sentiment analysis, and zero-shot classification with LLMs to suggest titles aligned with user preferences.
- Designed a responsive UI in Gradio and integrated LangChain with vector databases (Chroma) to power real-time semantic matching.
